Company: TD Newton

Location: Hyderabad

Category: computer-and-mathematical

Data Resilience Manager - Enterprise Architect :Background :The aim of the team is to protect our customers, colleagues & markets by ensuring we comply with the spirit of the regulatory requirements for operational resilience established by the Bank of England, FCA and PRA.The Data Resilience team have 3 main objectives :1. Setting up a Data Pillar: identify & define critical data assets supporting critical business processes. Finding innovative and pioneering solutions to deliver Data Pillar in ServiceNow - perhaps first in the industry.2. Assess level of resilience around those assets. 3. Key part of the assignment is to define/design/test and implement tooling requirements around this.The Data Resilience team are managing the E2E delivery of Data Resilience & Data Pillar Set-up, from requirements gathering, definition, user stories, ServiceNow platform, agree solutions, do the build, testing, implementation to go live.Key Responsibilities :- You'll look at how data flows from source to destination across the technology landscape and what can be done to ensure there is no data loss, data corruption, ransomware/malware attacks and the data can be recovered within the impact tolerance of Important Business Services.- You'll support the establishment of controls and assessment frameworks that identify data vulnerabilities across a complex data and technical landscape (e.g., on premise, 3rd party, middleware, databases, 3rd party applications, messaging queues, data feeds, data connections, APIs, batches, and cloud environments).- You'll support the embedding of data assessments engaging a large and diverse stakeholder group including target operating model design, data resilience MI design, data resilience RCSA design, changes to operational resilience, data security, technology, and data policies to embed the standards governing data resilience.- You'll analyse outcomes of

data resilience annual assessments and identify vulnerabilities from data perspective across availability, integrity, and security of data.- You'll support creation of data lineage using Ins-Pi and ServiceNow outlining the applications required for each step of the journey, upstream and downstream applications, how data moves in transit or held at rest across the technology landscape. - You'll present findings at senior Governance forums and help drive/shape the execution plan to remediate vulnerabilities next year. What we're looking for :We'd welcome applicants from diverse cultural and technological backgrounds, however financial services exposure will be important for this position. We will need to see evidence of the following in your CV :- Prior experience working within a role where you have been responsible for identifying data resiliency issues on middleware components e.g. batches, messaging queues, third party data connections, encryption, data recovery & backup, data vaulting, data integrity, and cloud technologies.- Financial Services experience and exposure to understanding some but not all; payments, cards, pensions, insurance, markets, trade & settlement, logon customer journeys.- Technical knowledge of FCA, PRA, EBA guidelines on operational resilience. - Experience in managing risks and controls.- Desirable (but please apply if you don't have them!) Exposure to either Ins-pi Designer or Ardoq for drawing data lineage.- Experience in batches, messaging queues, third party data connections, encryption, data recovery & backup, data vaulting, data integrity and cloud technologies is essential. - Strong experience in Disaster Recovery, back-up and restore, cyber threats and monitoring, data encryption domains.
