

Engineering-Bengaluru-Associate-Software Engineering

[Apply Now](#)

Company: Goldman Sachs

Location: Bengaluru

Category: computer-and-mathematical

Who We Are:The CF&O Shared Services Engineering team (CFOSS) is a centralized group within Engineering that supports divisional objectives of Compliance, Risk, Controllers and Corporate Treasury. The team provides common services cross divisionally in order to realize efficiencies and establish best practices across the organization. The team's core priorities include: Improving workflow efficiencies and governance through the systemization and automation of financial metrics and associated limits. Accelerating the adoption of Cloud and Core Engineering solutions. Establishing positions data quality, accountability and lineage. Developing unified data models across assessment platforms and ensure they meet regulatory and internal Risk & Compliance management requirements. Support the development of analytic calculations and data transformations.

Who We Look For:This Software Engineer role is for a professional who is passionate about bringing business impact through digital transformation and deployment of scalable and reliable software solutions. The CF&O divisions have a large footprint of software applications to ensure the firm complies with the controls set forth in its policies and risk appetite, meet its regulatory obligations, and to protect the firm's reputation. To meet the demand of the business, drive by the size and complexity of the entire firm, the candidate will have the mandate to continuously increase the level of automation and to modernize and consolidate our software stacks. The successful candidate will have demonstrated experiences in and passion for solving critical problems related to data warehousing, distributed computing and data analytics.

How You Will Fulfill Your Potential:Work in a dynamic, fast-paced environment that provides exposure to all areas of Finance. Build strong relationships with business

partners Understand business needs, data requirements and specifications required to support implementation. Facilitating and developing process workflow, data models and pipelines. Develop technical specifications, high level/detailed design, testing strategies, and implementation plans from business requirements Manage end-to-end systems development cycle from requirements analysis, coding, testing, UAT and maintenance Exploring new and emerging technologies as needed by the project. Required Qualifications: Bachelor's degree in Computer Science or related technical discipline 2+ years of experience in Java development 1+ year of experience with relational databases (Oracle, SQL Server, and SQL) Strong understanding of data structures, algorithms, and core programming concepts Understanding of Object-Oriented Programming (OOP) concepts and design patterns Excellent communication and interpersonal skills Experience with distributed computing (Sparks) and web services (RESTful, SOAP) Excellent problem-solving skills and ability to work independently and in a team environment
