Manager - Android Development

Apply Now

Company: ATech

Location: India

Category: computer-and-mathematical

<p>Profile : Manager Android Developer / Android Architect

WFH (Anywhere/ Remote location)

Job Description

Key Responsibility Areas :

- Building a high performance , scalable Android App for users.

- Designing a robust platform for the new features with best design pattern & modularity

- Coordinating with back end (API/DB) team for efficient solution & smooth integration

- Periodically review ,upgrade the App code base and define a Tech road map

- Proactively work on improving the various App vitals like Crashes, ANR, battery consumptions

- Mentoring/coaching of junior developers in the team

- Unit-test code for robustness, including edge cases, usability, and general reliability.

- Translate business concepts into User Interfaces and build for scalability, internationalization and performance.

- Understanding of Android SDK (UI frameworks, design patterns, geolocation services, etc

- Exceptional ability to test and debug on a wide array of Android devices

- Experience with Architecture Components, Android Design Library, Data Binding Library, MVVM

- Can optimize app efficiency using Dagger, Room, and Coroutines for streamlined, responsive development

- Knowledge of interactive application development paradigms

- Hands-on knowledge of Android Jetpack Components

- Proficient understanding of code versioning tools, such as Git

Must Have Skills :

- Minimum 2+ years of experience in Android App Development

- Kotlin /Java language proficiency is MUST

- Expertise with MVVM architecture , multi-modular Application, Architecture components

- Familiarity with Material Design guidelines, common mobile UX

patterns, and anti-patterns

- Proficiency in working with remote data via REST API and JSON using Networking Library

- Proficient in different design patterns using OOPS concepts and proven records of using them.

- Detailed understanding with third-party libraries and APIs , FCM Push Notifications, Android Ecosystem, deep linking

- Quick in debugging - Crashes / ANR, memory leaks, frozen frames, App Startup time, battery optimizations

- Solid understanding of the full mobile development life cycle.

- Experience in using test framework like Espresso

Good to Have Skills :

- Worked on a consumer(end user) facing App

- Worked on server driven UI system

- Experience on iOS App Development using Swift Language

- App publishing on Play Store & its policy compliant

- Experience in dependency injection(Dagger/Hilt)

- Knowledge of back end architecture (API gateway, DB, REST API controller) & its working

- Experience of CI/CD working

- Working knowledge of the general mobile landscape, trends, and emerging</p> (ref:hirist.tech)
