Senior Software Engineer (India)

Apply Now

Company: Demyst

Location: India

Category: computer-and-mathematical

Our Solution

Demyst is a data management company specialising in external data orchestration, helping leading global financial institutions support their business users with data access at scale within their centralized data platforms. In response to growing demand, we're seeking new team members to help us scale. By joining our team, you will play a crucial role in transforming the way enterprises access external data.

Demyst offers a standard configurable interface connecting external data ecosystems to centralized data platforms. We provide the necessary products, support team, and maintenance for production-ready, customized external data pipelines. Our pipelines include configured data, metadata, robust batch and real-time delivery, and ongoing support for optimal performance. Additionally, we offer a streamlined diligence, procurement, and data delivery service for evaluating new data, ensuring efficient decision-making based on agreed standards.

Don't miss out on the opportunity to play a vital role in revolutionizing data management for enterprises.

The Challenge

We are looking for a Senior Engineer to join our team to help build and improve our product. A successful candidate will be responsible for contributing to the security solutions design and implementation as well as driving development, testing, and deployment.

You'll be joining a team of smart and hardworking engineers who help each other succeed. Key to our success is a willingness to learn and adapt quickly, so be ready to try new things

and take on new challenges, with the support of the team of course.

While this is a fully-remote role, successful candidates are expected to be based in India. We will also hold certain workshops and fun activities from time to time that we expect the team to attend.

Responsibilities

Architect, design, and implement services at scale

Implement and configure custom solutions and deploy custom solutions for client use cases to production

Drive continuous improvement of Demyst's next-generation privacy technology for compliance with existing and emerging privacy regulations like CCPA, GDPR, etc.

Collaborate with internal and external stakeholders, such as product managers, executives, and department heads, to understand their requirements and translate them into actionable engineering plans

Communicate project status, key milestones, and technical challenges to stakeholders, ensuring transparency and alignment

Stay up-to-date with industry trends and emerging technologies

Own the development and integration of external data pipelines, ensuring that pipelines are performant and highly available

Collaborate with internal and external stakeholders, such as product managers, executives, and department heads, to understand their requirements and translate them into actionable engineering plans

Communicate project status, key milestones, and technical challenges to stakeholders, ensuring transparency and alignment

Mentor and coach team members, fostering their professional growth and promoting a culture of continuous learning

Stay up-to-date with industry trends and emerging technologies. Be able and willing to learn new languages and concepts

Work independently and proactively identify opportunities to improve the code base and development practices

Be a team player and always willing to help other team members when required

Other duties as required

Requirements

Bachelor's degree or relevant qualifications in Computer Science/Engineering

5+ years of professional software development experience

Working knowledge of different programming languages such as Javascript (React), Ruby, Python, etc.

Experience with consumption of web services (JSON, REST, XML/SOAP)

Experience with software engineering and version control using Git and GitHub

Experience with automated testing (unit + integration tests)

Motivated and / or experienced in working on world class architecture setup for a global company and its network to resolve data needs

Experience with reviewing system design and architecture documentation and preparing materials addressing security controls

A good understanding of how web applications and distributed systems work

Understanding of the cloud architecture and components

Experience using collaboration tools such as Jira and Confluence

Collaborative attitude, great communicator, and problem solver

Relevant work and research experience are also welcomed

Understanding of globally distributed teams and asynchronous communication methods

Benefits

Distributed working team and culture

Generous benefits and competitive compensation

Be a part of the exploding external data ecosystem

Join an established fast growth data technology business

ESOP awards available for tenured staff

Collaborative, inclusive work culture

Work with the largest consumer and business external data market in an emerging industry that is fueling AI globally

Outsized impact in a small but rapidly growing team offering real autonomy and responsibility for client outcomes

Stretch yourself to help define and support something entirely new that will impact billions

Work within a strong, tight-knit team of subject matter experts and overseeing a team of renaissance technical talent

Small enough where you matter, big enough to have the support to deliver what you promise

Demyst is committed to creating a diverse, rewarding career environment and is proud to be an equal opportunity employer. We strongly encourage individuals from all walks of life to apply.
