

Speridian Technologies - Senior Azure Data Engineer - Databricks/Data Factory

[Apply Now](#)

Company: Speridian Technologies

Location: Bangalore

Category: computer-and-mathematical

Experience : 5+ Years. Notice Period : Immediate to 30 Days (max). Role: Azure Data Engineer. Location: Bengaluru (Hybrid). Job Description : As an Azure Data Engineer, your role will involve designing, developing, and maintaining data solutions on the Azure platform. You will be responsible for building and optimizing data pipelines, ensuring data quality and reliability, and implementing data processing and transformation logic. Your expertise in Azure Databricks, Python, SQL, Azure Data Factory (ADF), PySpark, and Scala will be essential for performing the following key responsibilities :

- Designing and developing data pipelines : You will design and implement scalable and efficient data pipelines using Azure Databricks, PySpark, and Scala. This includes data ingestion, data transformation, and data loading processes.
- Data modeling and database design : You will design and implement data models to support efficient data storage, retrieval, and analysis. This may involve working with relational databases, data lakes, or other storage solutions on the Azure platform.
- Data integration and orchestration : You will leverage Azure Data Factory (ADF) to orchestrate data integration workflows and manage data movement across various data sources and targets. This includes scheduling and monitoring data pipelines.
- Data quality and governance : You will implement data quality checks, validation rules, and data governance processes to ensure data accuracy, consistency, and compliance with relevant regulations and standards.
- Performance optimization : You will optimize data pipelines and queries to improve overall system performance and reduce processing time. This may involve tuning SQL queries, optimizing data transformation logic, and leveraging caching techniques.
- Monitoring and troubleshooting : You will monitor data pipelines, identify performance bottlenecks, and

troubleshoot issues related to data ingestion, processing, and transformation. You will work closely with cross-functional teams to resolve data-related problems. Documentation and collaboration : You will document data pipelines, data flows, and data transformation processes. You will collaborate with data scientists, analysts, and other stakeholders to understand their data requirements and provide data engineering support. (ref:hirist.tech)
